

The Society and the Geographic thank recent donors of financial support

Our April/May 1977 issue listed and thanked benefactors who had helped the Society since 1973, when a "special names" financial appeal was launched which continued through 1974. That acknowledgment also included the names of donors of unsolicited gifts.

In the December/January issue which followed we published our thanks to a further list of donors whose gifts had been received up to Oct. 31, 1977.

Now the Society wishes to thank those responsible for new donations received between Nov. 1, 1977 and Oct. 31, 1978. The list below consists of all donors of amounts in excess of \$10, except for one anonymous donor living in Scarborough, Ont. (It does not repeat the names of those from whom payments have been received in connection with five-year pledges made in 1974 and 1975; they were listed in our April/May 1977 issue.)

Mrs. W.M. Benidickson, Ottawa,
British Columbia Forest Products Ltd.

Book Reviews

Newfoundland and Labrador Prehistory, by James A. Tuck (Canadian Prehistory Series, Archeological Survey of Canada, National Museum of Man, National Museums of Canada, Ottawa, 1976, 127 pp., \$6.95).

In this slender volume, James Tuck leads us through some 8,600 years of prehistory in Newfoundland and Labrador — from 7000 B.C. to 1600 A.D. Most readers will probably be astonished to learn that man has lived for so long in that remote stark corner of North America. Even the more informed reader will be astonished to learn that burial mounds were being constructed along the Strait of Belle Isle some 5,500 years ago. It's a long and intriguing story.

Tuck introduces us to six different cultures: the Paleo-Indian, Maritime Archaic, Paleo-Eskimo (i.e., Arctic Small Tool Tradition and Dorset), Beothuk, Naskapi-Montagnais, and Thule Eskimo. Each is introduced and described in turn.

The excellence of this book, however, is derived not only from the high quality of Tuck's descriptions. To a much greater degree, it comes from the manner in which

he uses those descriptive elements to write the human history of the area. For Tuck is not primarily interested in the stones and bones of archeology, but in the people who left those stones and bones scattered across the northeast corner of the continent. He

ically, it interacted with the Paleo-Indian area to the south, and with Arctic Canada to the north. One of the central themes of the book is the interplay between the people of the coast and the interior, their movement from the coast, to the interior, then back to the coast, as they followed the annual cycle of activities.

Newfoundland and Labrador Prehistory tells the story of an area in a simple, narrative style. The author says that he wished to avoid the detailed descriptions and intricate reasonings that make most archeological reports rather formidable to the uninitiated. Sharing the esoteric knowledge of professional archeologists with the general public is not always easy, but it is something that we should try to do as often as possible. In this, Tuck has been eminently successful. He has written an attractive, well organized, and well illustrated book; both the professional archeologist and the general public will be able to read it with pleasure and profit.
